DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 10 and 12-18 and have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10 and 12-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in this application in view of Treat et al. (US5412678).

With respect to claims 10, 12, 14-15, and 18, the prior art shows in Fig.5 a semiconductor laser device comprising a first semiconductor laser structure made up of a first multiple layers (103A, 104A, 105A) including a first active layer 104A and a second semiconductor laser structure made up of a second multiple layers (106A, 107A, 108A) including a first active layer 107A. The prior art lacks an etching control layer. Treat teach a GaInP etching control layer (etch stop layer J in Fig.4A, see col.6, l.17). For the benefit of improving the crystallinity of the multiplayer structure, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the prior art an etching control layer as taught by Treat.

Art Unit: 2828

With respect to claim 13, the prior art discloses in Fig. 5 a buffer layer 102.

With respect to claims 16-17, Treat disclose the (AlGa)InP compound (col.6, l.19).
